PCT/KR2004/000780

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-4	YES
	Claims	NONE	NO
Inventive step (IS)	Claims	1-4	YES
	Claims	NONE	NO
Industrial applicability (IA)	Claims	1-4	YES
	Claims	NONE	NO

2. Citations and explanations (Rule 70.7)

Reference is made to the following documents:

D1: JP 04-34203 A (05 February 1992)

D2: JP 51-69768 A (16 June 1976)

D3: DE 3329171 A1 (28 February 1985)

D4: US 2002017190 A1 (14 February 2002)

(1) Novelty

The key feature of the present invention is the means to provide a rotational force to a rotational axis by converting a linear motion of a cylinder generated by fluid pressure into a rotational motion and to control the angular displacement. However, none of the documents D1 to D4 disclose means for controlling the angular displacement. Therefore, the subject matter of claims 1 to 4 seems to be novel (Article 33(2) PCT).

(2) Inventive Step

It would not be obvious to a person skilled in the art to combine the sensor of D4 for detecting the position of a piston with the actuator of D1 to D3, thereby achieving the function of controlling the angular displacement that the present invention has. Therefore, none of the documents D1 to D4 teach or fairly suggest the means for controlling the angular displacement, and consequently claims 1 to 4 meet the requirement of PCT Article 33(3).

(3) The present invention is industrially applicable to a hydraulic actuator for providing a rotational force to a rotational axis by converting a linear motion of a cylinder generated by fluid pressure into a rotational motion. Therefore, claims 1 to 4 meet the requirement of PCT Article 33(4).
